Week 9 Assignment – LLM Transcript

2026-10-30

LLM Transcript and Citation

Tool Used: ChatGPT (OpenAI, GPT-5.3)
Purpose: Assisting with API selection, structuring the API request, resolving JSON parsing issues, and refining data transformation and analysis.

Course: DATA 607 – Week 9 Assignment

Citation:
OpenAI. (2026). ChatGPT (GPT-5.3) [Large language model]. https://chat.openai.com.
I used ChatGPT to assist with selecting a suitable New York Times API, structuring the R workflow, resolving issues with the API response, and refining the final analysis.

[1] Conversation with ChatGPT (Structuring API authentication)

Prompt:
How should I securely use my API key in R without hard coding it?
Assistant (ChatGPT):
Store the API key in an environment variable and access it using Sys.getenv().
Suggested code:

```
api_key <- Sys.getenv("NYT_API_KEY")
```

[2] Conversation with ChatGPT (Parsing JSON and creating tibble)

Prompt: How do I convert the API JSON response into a tidy data frame?
Assistant (ChatGPT): Parse the JSON using jsonlite::fromJSON() and extract the results section, then convert it into a tibble.
Suggested code:

```
nyt_text <- content(response, as = "text", encoding = "UTF-8")
nyt_json <- fromJSON(nyt_text, flatten = TRUE)
nyt_df <- as_tibble(nyt_json$results)
```
